

Overview

Remail will install an application on your gmail account that would consistently **check your inbox for incoming messages**. (The system checks your messages once every minute).

Upon detecting a new message, a **text notification** will be sent to you. This text will include the **sender**, the number of **attached files** and as much of the content that fits into a single text message. (Depending on your carrier, we may be able to expand this up to 1000 character at once.)

You now have the option of requesting to **view more of the email**, and to **reply** or **forward this message**, using **simple commands**. Please see the manual for instructions.

This is how your **email will show up as a text message on your phone**

Get next part of the email:

Once you have received the first part of your email as a text message, you can decide whether you want to see the rest of the email by replying with the word **more**.

Reply to the email:

Using this same system, you can also have your email account **reply** to the email, **forward** your email or even **compose** a new email message, using your simple phone. **ReMail** will program your email to understand what you want it to do.

- A The Remail message ID for this email is 12
- B This email is divided in 5 parts. This is the first part
- C Subject Line
- D Number of Attachments
- E Who sent this email
- F First part of message
- G Email contains an image here

FEATURES & COMMAND CODES [How to Remail]

Important: Every time you want to reply etc. to a specific email you have to write first the number of the email. (For example: to reply to email number 26, type: **26 reply**) In this Manual we are using number **12** as an example

Command:	What it does:	Example :
more	Shows you the next part of the message	12 more
reply	Replies to the email	12 reply thanks
send	Compose a new email	send abc@gmail.com Hello
fwd	Forwards the email	12 fwd abc@email.com
blacklist	Ignore future messages from this sender	12 blacklist
files	Get attachment information	12 files
stop	Stops the ReMail service	stop
start	Retarts the ReMail service	start
save	Saves an email address to a nickname	12 save john

Notes:

more: You can also get a few parts by using the command **more 2** or any number up to 5 at once **more 5**

reply: You can **Reply to All** (if email was sent to more people) by using **replyall** instead of reply

send: Create a subject by adding a **p** between the subject and body like this: **send abc@gmail.com Subject Here P Your Text Here**

fwd: To add words to the email just write them after the email address like this: 12 **fwd abc@gmail.com Your Text Here**

blacklist: To remove from blacklist, you can just send 12 **unblacklist** or **unblacklist abc@gmail.com**

attachment: If the email has **files** the number of attached files will always be displayed in the beginning of the message

stop: when you get to your office send **stop**

start: when you leave your office send **start**

save: You will find it convenient to set names to the contacts you often use, so you can then write for example **send john Hello** you can also save names by typing **Save abc@gmail.com john**
